

# SmartConnect

The power of connected equipment

Connected equipment offer numerous advantages, including **optimized operations, reduced costs, simplified recipe management, eliminated downtime, automatic updates, and predictive maintenance.**

**Meet SmartConnect, the cloud-based dashboard for remote fleet monitoring.**

## Optimizing Operations and Efficiency

SmartConnect empowers your business to streamline your operations and enhance efficiency. Remote monitoring and control capabilities ensure consistent cooking temperatures and precise cooking times, reducing errors and improving overall operational efficiency. This leads to **uniform food quality across multiple locations.**

## Reducing Service Costs

SmartConnect minimizes service costs through remote monitoring and diagnostics. Early issue detection reduces expensive on-site service calls, while **predictive maintenance** prevents breakdowns. This proactive approach minimizes downtime and optimizes maintenance efforts, significantly lowering service costs.

## Eliminating Downtime and Enhancing Reliability

Through continuous monitoring and predictive maintenance algorithms detect and address potential issues early, ensuring the **reliability and uninterrupted operation of the equipment** ensuring customer satisfaction and prevents lost sales.

## Simplified Recipe Management

SmartConnect simplify recipe management by providing a centralized database. You can **easily upload and update recipes**, ensuring consistency and accuracy across multiple rotisseries. This simplifies the introduction of new menu items, limited-time offers, or seasonal dishes and ensures menu consistency across various locations.

## Automatic Software Updates

Connected equipment automatically receives software updates, providing latest features, security patches, and performance enhancements effortlessly. This future-proofs businesses, enabling adaptation to industry trends without costly upgrades.

**making food irresistible**

# Access Levels & Security

Access your personal dashboard to monitor and manage the status of your equipment fleet, upload recipes and analyze operational data. Access levels can be managed. You can even allow selected service partners to consult the service dashboard and perform online diagnosis. The SmartConnect platform meets the highest security standards and utilizes the MQTT protocol. Connection is established using a secured Wi-Fi connection. The latest TLS/SLL encryption is used for data transfer.

*SmartConnect is available for all Wi-Fi equipped TDR and LDR auto-clean rotisseries and the GO Combi ovens*
